¹⁾The Zener Impedance is derived from the 60 Hz AC voltage which results when an AC current having an RMS value equal to 10% of the Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK}. Zener Impedance is measured at two points to insure a sharp knee on the breakdown curve and to eliminate unstable units.

²⁾Valid provided that electrodes are kept at ambient temperature.

³⁾Measured under thermal equilibrium and DC test conditions.

⁴⁾Tested with pulses t_p = 20 ms.
